

Student Registration Platform Software Engineering.

Functional requirements.

1. Student should be able to login.
2. students should be able to register for a course.
3. students should be able to see all courses on offer.
4. students should be able to make a course as done(marks all units as done).
5. students should be able to mark a unit as done(marking all as done marks the course as done, need to track and show percentage completion)

Possible routes.

1. `/login/` - loads login page, uses post requests to submit credentials.
2. `/courses/` - list all available courses.
3. `/courses/{dynamic/path parameter}` - clicking a course on the courses listed page shows a detailed view of that course including units it contains.
4. `/register/` - clicking the register button from the courses listed page or the detailed course view submits data needed for course registration.

Courses page.

- Lists all available courses.
- a filter drop-down menu or search bar for filtering results, can use query parameters.
- clicking a course opens it in detailed view via dynamic routes based on the course id.
- each course tab has a register button both in minimized view and detailed view for good user experience.

Wireframes.
